

2021-22 Genetics Catalogue - Beef

There's always room for improvement

Short Gestation Herefords

Bred specifically for use on the dairy cow. These polled Herefords produce a high value beef cross calf that can be grown outside on grass/forage to produce a valuable carcass.

These bulls offer:

- Short Gestation Length
- Easy Calving
- Strong white face markings
- Fantastic reliability with over 500,000 progeny from NZ, UK and Irish dairy cows

Short Gestation Aberdeen Angus

Angus cattle are a black beef breed that can be traced in Scottish history as far back as the 16th century.

They are known for finely marbled meat, where the fat is dispersed evenly against the actual cut of meat. The marbling trait of Angus typically creates a tenderer, juicy flavourful meat compared to some other beef breeds.

LIC have for many years been working with Rissington Cattle Company for the supply of Angus semen, which is selected for known traits that can make a real difference in cow herd profitability. The Angus herd has been in the Rissington family since 1936. All animals are recorded on Breedplan and the Leachman multibreed database which includes over one million animals. Rissington herd was the first Angus herd in New Zealand to be fully genotyped, enhancing the accuracy of information.

RISSINGTON 180091

Sire: Kakahu Advance 15027 | Dam: Ellerton 160078
Herdbook No: 145720180091 | UK Registered Pedigree

There's always room for improvement

Wagyu

The quality of Wagyu beef is renowned across the world, with the marbling quality and flavoursome meat, offering consumers a great dining experience.

The quality of the Wagyu beef animal when crossed over a Holstein Friesian or Jersey crossbred cow is achieving high praise both domestically and globally. The early maturing of the Jersey breed when crossed with Wagyu is producing a high end product that's creating a great eating experience in restaurants around the world.

These animals are being grown on grass and returning premium prices. The grass-fed labelling is also driving the value in the end product, with the slightly yellower fat seen as proof of a pasture diet. Ohanasaki Brilliant's calves are quick on their feet with easy calving and gestation length of just 282 days. Brilliant is now 10 years old and going strong, with offspring in Spain, France and the UK. His crosses (F1) have been the delight of chefs in many, many, restaurants. We're very fortunate to be able to offer a Wagyu bull of such high calibre.

Ohanasaki Brilliant S3032

Sire: Takeda Farm Fukutsuru 004 | Dam: Lake Wagyu Y047

Identifier: OHAFE90233
